BVRD2S/LT

Extension module + 12 inputs + 16 outputs + 12 messages
EN 60849, BS5839 part 8, EN 54

EN54-16

MADE IN 
5 years warranty

- The BVRD2S/LT is an extension to the audio router BVRED2M, it is EN54-16 compliant and manufactured in Europe. Designed for complex applications our team is at your disposal to fix the system which will fit to your requirements.
- The Power & communication is achieved by internal connection between the both modules (master & slave).
- Audio connections using RJ45.
- The BVRD2S slave unit(s) mount directly on top the master unit
5 modules can be connected together after a BVRD2M master unit, directly by internal data link.

- BVRD2S :
+ 12 extra inputs,
+ 16 extra outputs
+ 12 extra messages
- BVRD2SLT :
+ 6 extra inputs,
+ 8 extra outputs,
+ 6 messages

2 extension modules are available in the range : BVRD2S & BVRD2SLT

Caractéristiques BVRD2S/BVRD2SLT		
DSP-Control	The BVRD2SLT can be upgraded to a BVRD2S simply by adding a DSP-control card and removing blanking plates - providing a solution for future system expansion.	
Switch	The 'bypass all call enable' switch can be used to prevent an 'all call' message from being broadcast to the selected outputs. This is often used if one of the outputs is being used as a local monitor.	
The VIGIL2 range	Products in the VIGIL2 range of voice alarm products include: BVRD2M DSP-controlled router. BVRD2M4 DSP-controlled router. BVSMP switch mode power supply. BVSMPLT switch mode power supply (half BVSMP). BV225, BV125D & BV050Q D-class amplifiers. BVRD8, BVRD16, BVRD24, BVRD32, BVRD40, BVRD48, BVRD56 & BVRD64 voice alarm control microphones.	
	BVRD2S	BVRD2SLT
Audio balanced line input	12	6
Audio balanced line output	16	8
Messages on Flash memory	12	6
